

Statement of participation

Any Darina Santiago Martinez

has completed the free course including any mandatory tests for:

Machines, minds and computers

This 10-hour free course looked at what 'intelligence' is, how computers may become intelligent, and whether they ever will really be so.

Issue date: 13 February 2026

COURSE CODE: **M366_1**

Machines, minds and computers

<https://www.open.edu/openlearn/digital-computing/machines-minds-and-computers/content-section-0>

Course summary

Computers are becoming smarter and may soon become intelligent. This free course, Machines, minds and computers, looks at what intelligence is, how computers may become so, and whether they ever will really be intelligent. It is aimed at people interested in understanding what intelligence and thinking really are, and who want to understand the underpinnings of our ideas about them.

Learning outcomes

By completing this course, the learner should be able to:

- explain the distinction drawn in this course between artificial intelligence and Symbolic AI
- describe various possible tests for machine intelligence
- explain the concepts of a computer model and of an optimisation problem
- distinguish between a simulation, a replication and an emulation
- distinguish between strong and weak artificial intelligence.

Completed study

The learner has completed the following:

Section 1

Machines

Section 2

Minds

Section 3

AI

Section 4

Computers

Section 5

Conclusion – Symbolic AI and Cybernetics
